

SharePoint Extranet Accelerator

SECURELY COLLABORATE WITH YOUR CLIENTS AND BUSINESS PARTNERS

Lead your industry by providing your clients and business partners with a best of breed collaboration experience.

Project Management: Securely collaborate on projects both locally and globally by publishing documents and schedules related to your project into a secure repository that can be accessed by both parties. Centralization means avoiding email Ping-Pong, lost documents and ensures everyone has one version of the truth. Auditing, versioning and access controls protect your content from accidental destruction.

Subcontractor Management: Need to collaborate with your sub-contractors, but don't want to expose them to your corporate environment? An Extranet Collaboration Portal is just for you. Keep your sub-contractors and thus your projects on-track/on-budget.

Request for Proposal/Quotation/Information: Automate your bidding process by publishing and monitoring your RF processes and integrate the results with your ERP system. Make your company or government agency easier to work with, helping your suppliers minimize their bid expense.

Invoicing and Bill Presentment: Place your invoices and transactional data on-line for easy customer access, eliminating mail lag-times and "I didn't get the invoice" excuses from your accounts receivable process. Automatically notify clients when new invoices are generated. Connect to popular ERP solutions like Microsoft Dynamics, Sage AccPac and Epicor.

Powered by Microsoft SharePoint and Nintex Workflow, this service line offering gets your Extranet Project off the ground in a fraction of the time of traditional methods.
